GovQA: Comprehensive Data Protection

Our obsession with security equips you with a world-class cloud environment that meets and exceeds your most demanding requirements

Application Security

Architectural barriers protect against malicious invasion.

- Single tenant, isolated database for no comingling of data
- Proprietary platform code (with no open source code used in core application) reduces vulnerabilities and reduces vulnerabilities and adds protection against hackers

Layered with internal security measures

- Encrypted at rest and in transit, so only authorized users gain access to data
- Role-based access controls limit what users can see and do
- Multi-factor authentication improves access security
- Single sign-on integration available

Fully Audited and Compliant

The GovQA platform is audited and attested annually as fully CJIS, HIPAA, and FISMA/NIST (Moderate) compliant.

Hosting Security

Secure Cloud Hosting

GovQA's Fortress™ Secure option includes Microsoft Azure Government® hosting to provide the most advanced, technically sophisticated ongoing security available to government today.

Personnel Security

Monitoring and Oversight

The GovQA team's extensive in-house SETA (Security Education Training Awareness) program includes CJIS/HIPAA training and certification for employees; incident handling policies, dedicated onsite security staff, FBI LiveScan Fingerprint background checks and more resulting in best-in-class, continuous auditing and compliance.
